

BMP 063 - Designate Areas for Fueling from Mobile Fuel Tankers

Description of Potential Pollutant and Source: Overflows during fueling can expose significant materials to storm water. These materials can be transported to the storm drain and/or receiving waters.

Description of BMP: Minimize the use of mobile fuel tankers. Designating areas for fueling will reduce the chances of fuel spills reaching storm water. Most vehicles, with the exception of tracked vehicles such as tanks and bulldozers, should be able to travel to designated areas with minimal lost time.

Application Guidance: Fueling areas will be designated whenever a large number of mobile equipment are being used.

Training; Personnel will be notified of the locations of designated fueling areas.

Effectiveness and Cost: Designated fueling areas are a highly effective, low-cost BMP.

Limitations: None
